

UmpireTracker

The Modern Game: Umpire Tracker App tracks up to 3 field umpires in the one game. Built for iPad's, you can capture detailed observations on each umpire to share in 'real time' and after the game. All this information is saved in history and quality reports can be emailed.

To start a new observation, enter in the name of the home team and opposition team, the round number, ground location and then set up the number of umpires you would like to observe. Select the free kicks you would like to track (likely to be all of them) and then tap start. Throughout each quarter, you simply select the umpire in control of the game at that point in time, tap 'New Observation' and select the 'decision', 'free kick', 'for/against' and 'zone'. From there, enter any specific comments and tap save. As you move from quarter to quarter, all information from the previous quarter will automatically save.

Main Features:

Simple and quick to use

Can observe up to 3 field umpires by name and number (if desired)

You select the free kicks you want to track (add your own if you wish)

Allows you to enter detailed notes as you go and at the end of each game

Timestamps notes for easy reference

Live data can be accessed and shared in 'real time'

All information is saved in history and can be accessed for future reference

Quality reports produced in summary form and by individual umpire and sent by email direct from the app

Customisation options throughout the app – to best suit your needs and taste.
